Rushabh Patre	747

A Sports Blogging website which mainly focuses on articles on latest updates and stories in the world of sports. The website will display personalised content as per the user's interest and activity. Users can check these stories or also can give their own inputs and write their own blogs. The registered users can follow each other to see the content of their liking. Apart from these blog articles, the website will also display real-time live scores of ongoing matches across a variety of different sports.

Stakeholders:

- 1) *Bloggers* - Users interested to write and publish content can do so.
- 2) *Sports Enthusiasts* - Users who want to stay updated about the ongoing events in sports.

Technology Stack(Tentative):

- 1) HTML - For designing the website.
- 2) CSS - For styling the pages.
- 3) JavaScript - For animations and other operations.
- 4) Bootstrap - To make the website responsive.
- 5) MySQL - For storing the blog data.
- 6) PHP - For database connectivity.

Website Pages:

- 1) Landing Page - Brief about the website, User sign-up for account creation and log-in, Latest news and live scores.
- 2) Sign up Page - Collecting user data for account creation.
- 3) Log-in Page - For users to sign in into their accounts.
- 4) Profile Page - Shows user's basic information, interests and blogs written by him/her.
- 5) Blog Posting Page - Users can write and post a blog from here.

- 6) My Blogs Page - Users can edit or delete his/her blog articles and can also check the response from the readers.
